

Pre-AP Chemistry and Illinois Learning Standards for Chemistry: Alignment Summary

Pre-AP courses focus deeply on a limited number of concepts and skills with the broadest relevance for high school coursework and college and career success. The course framework serves as the foundation of the course and defines these prioritized concepts and skills.

When teaching a Pre-AP course, teachers have purposeful time and space to bring their own voice and lessons into each unit to best meet the needs of their students and address the full range of state standards. This alignment summary demonstrates the deep connections between the Pre-AP Chemistry Course Framework and the Illinois Learning Standards for Chemistry to support teachers and schools in their planning. Along with the corresponding standards crosswalk, teachers and schools can use this alignment summary when planning and preparing to implement Pre-AP Chemistry.

Alignment at a Glance: Very Strong

ILS for Chemistry:

- **HS-PS1 Matter and Its Interactions**
 - HS-PS1-1
 - HS-PS1-2
 - HS-PS1-3
 - HS-PS1-4
 - HS-PS1-5
 - HS-PS1-7
- **HS-PS3 Energy**
 - HS-PS3-1
 - HS-PS3-4

Discipline Highlights

- ✓ Overall, the alignment between the Pre-AP Chemistry Course Framework and the ILS for Chemistry is very strong.
- ✓ Across both strands of the ILS for Chemistry, the majority of the standards are addressed in full by the Pre-AP course framework.
- ✓ In some instances, the Pre-AP Chemistry Course Framework addresses content with greater depth, level of detail, and scope than the ILS for Chemistry. For example, the Pre-AP framework addresses standard HS-PS1-4 in full, but also extends beyond the content of the standard to include calculation of reaction enthalpy using bond energies and calorimetry.

= **Very strong alignment**

= **Partial alignment**

Alignment between the Pre-AP Chemistry Course Framework and the ILS for Chemistry is described as *very strong* or *partial*. A *very strong* alignment is one in which the majority of the standards are fully addressed by the mapped Pre-AP Learning Objectives (LOs). A *partial* alignment is one in which the standards are partially addressed by the corresponding Pre-AP Learning Objectives. Partial alignment can occur when one framework includes greater specificity or extends beyond the scope of the other framework. Given the focused nature of the Pre-AP course framework, some partial alignments are to be expected.

Alignment at a Glance: Partial

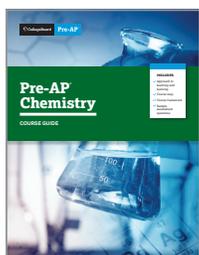

Discipline Highlights

The Pre-AP course framework has a more intentionally narrow focus on a prioritized set of concepts, so certain topics are considered outside of the scope of the Pre-AP course. For example, HS-PS1-6, which deals with chemical equilibrium, is not included in the Pre-AP framework.

Summary

Beyond alignments to the course framework, it is also important for educators to turn to the Pre-AP Shared Principles and Pre-AP Science Areas of Focus to understand the full picture of alignment between Pre-AP Chemistry and the ILS for Chemistry. The shared principles and areas of focus represent the Pre-AP approach to teaching and learning, and these principles deeply address skill development and disciplinary practices that cannot be easily captured within a standards crosswalk. **In summary, there are ample opportunities for teachers to address the ILS for Chemistry with confidence throughout this course.**
